

Annual CSU/Colorado Weed Network Field Day

June 28, 2018

Come take part in the annual CSU/Colorado Weed Network field tour, a day of cutting-edge research where we will evaluate long-term management options for invasive winter annual grasses (cheatgrass, Japanese brome, jointed goatgrass) throughout the Colorado Front Range. We will also be touring bare ground and biennial/perennial weed control research sites across the Front Range area. The 2017 field tour included county weed managers, private applicators, and federal agencies as we attempt to provide solutions for invasive species management and the opportunity to foster further collaborations across boundaries.

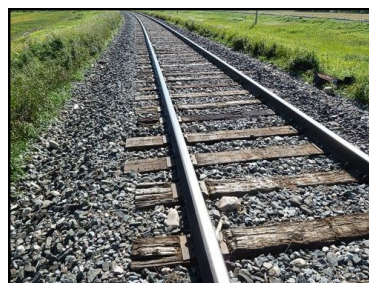

*Please register for the tour at our Eventbrite page: <https://www.eventbrite.com/e/csucolorado-weed-network-field-day-tickets-45499329720>
