

# Are YOU interested in helping plan research that benefits your COMMUNITY?

CU Boulder scientists and researchers are interested in partnering with community members to conduct societally and environmentally relevant research related to climate change.

*What **community-based questions** related to **climate change** do you think we could study together?*

Possible topics we could study together include wildfires, drought, landslides, water quality, air quality, science education and social impact, or other environmental issues of interest.

We are especially interested in hearing from community members or organizations who would like to be co-researchers in answering community-generated questions of environmental and social relevance. We are interested in developing long-term community relationships and research projects.

If you're interested in participating in collaborative community-based research, please fill out a brief survey **by January 15, 2024**, using the QR code or at <https://forms.gle/aJ4xXcPpjyC5ej2G8>.

[Dr. Arthurs](https://experts.colorado.edu/display/fisid_145087) is the lead contact for this project ([https://experts.colorado.edu/display/fisid\\_145087](https://experts.colorado.edu/display/fisid_145087))  
To inquire about the project, please contact Dr. Arthurs at [Leilani.Arthurs@colorado.edu](mailto:Leilani.Arthurs@colorado.edu).
